Double Weeping Flowering Cherry

Prunus subhirtella pendula

01-29

<u>Hardiness</u>	<u>Exposure</u>	<u>Soil</u>	<u>Water</u>	<u>Flowers</u>	<u>Height</u>
Zones 2-7	Full sun	Requires fast draining, well aerated soil	Moderate to regular watering	Usually blossom before leaf out, good fall coloring	10-12 feet tall and wide

Weeping Higan Cherry grows 20 to 30 feet tall and spreads 15 to 25 feet in a graceful weeping habit. Leaves stay glossy green throughout the summer and into the fall when they turn a vivid yellow before leaving the tree bare in winter. The drooping bare branches even lend a soothing grace to the landscape in winter. There is nothing quite like the Weeping Higan Cherry in full bloom in the spring. The light pink (almost white), one-inch-diameter flowers cover the branches before the leaves emerge, giving the appearance that fresh snow has fallen on the tree.
