

Pink Vine Wisteria

Wisteria floribunda

04-24

<u>Hardiness</u>	<u>Exposure</u>	<u>Soil</u>	<u>Water</u>	<u>Flowers</u>	<u>Height</u>
Zones 2-24	Partial or full shade	Tolerant of many soils	Regular to ample watering	Pink vines are pink floribunda comes shades of violet, blues and white and combinations, in showy clusters	To 35 feet

Japanese wisteria is a deciduous woody vine capable of growing to 70 feet long. Stems can be large (10 inches in diameter) with smooth, tight gray to white bark. Alternate, pinnately compound leaves are tapered at the tip with wavy edges. Lavender, pink or white flowers are fragrant, very showy, and abundant and occur as dangling clusters. Seed are in a flattened bean-like pod. Invasions often occur around previous plantings. Japanese wisteria can displace native vegetation and kill trees and shrubs by girdling them. They have the ability to change the structure of a forest by killing trees and altering the light availability to the forest floor. A native of Japan, it was first introduced into America around 1830 for ornamental purposes.
